PRETREATMENT SPRAY NOZZLES AND FITTINGS

ASSEMBLY CODING EXAMPLE

CLIP ON TYPE	BALL ASSEMBLY	NOZZLE TYPE
SAE14	SQB	SQC6002

NEW DESIGN

SWIVEL CLIP ON NOZZLES

SA series swivel clamps are specially designed swivel clip on nozzles. To install SA series swivel nozzle assembly on pipes all you need is drill a hole of 14 mm or 16 mm (selecting the model), insert the nozzle body inside and clamp it. This is a robust, easy to install, adjust and service design and it is designed for modern surface pre-treatment plants. They provide excellent performance and easy maintenance.

Typical application : Used in pre-treatment process, industrial washing Machines and various processes.

Max working temperature : 80°C

Swivel Degree : 40°

Recommended working pressure : Single spring : 3 bar
Double spring : 5 bar

Materials

Body : Polypropylene (20% - 25% glass filled)

Clamp : SS 304 / SS 316

O-ring : (NBR) Nitrile Rubber, FKM (Viton®)

Single Clamp

Double Clamp

PLASTIC SWIVEL BALL NOZZLES

Integrated flat swivel ball spray nozzles are designed for diversified applications. They can be easily adjusted for spray pattern orientation and offer a quick-fit connection. Also available in various flow rates and spray angles with colour coding. Suitable for SA series clip on clamp.

Spray pattern : Flat spray

Typical application : Pre-treatment process, Semi conductor industry

Material : Glass filled PP

BM

TANGENTIAL ENTRY HOLLOW CONE SPRAY NOZZLE

Uniform hollow cone spray at low pressure.
Best suitable for cooling towers.

Size : 1/2" BSP (F)
3/4" BSP (F)
1" BSP (F)

Spray angle : 60° to 90°
Materials : Glass filled PP
Colour : Black

**BN**

TANGENTIAL ENTRY HOLLOW CONE SPRAY NOZZLE (CLIP ON TYPE)

Uniform hollow cone spray pattern with fine droplets.

Application: Cooling tunnel, Pasteurizer
Size: suitable for 1" pipe
Spray angle : 90°
Materials : Glass filled PP
Colour: D blue, Red

ACC 350 END CAPS

ACC350 plastic caps are best suitable to plug pipes ends also it can be used to seal pipes ends when, to manufacture different size products, it is made of glass filled polypropylene offer the best resistance to chemicals. They are widely used in surface pre-treatment.

Max working temperature 80°C.

Materials

Polypropylene (20% - 25% glass filled)

Spraytech CM Series Spray nozzles work equally effectively. The nozzles give a sharp, defined, fan shaped water jet providing efficient cleaning. Spraytech Spray nozzles are ideal for washing, dust control and deslurrying applications. Spraytech Spray nozzles made from polyurethane ensure efficient cleaning.

Features : Uniform spray pattern, Coarse flat fan spray,
Tough wear resistant, One piece molded construction,
Corrosion-resistant, Economical

Spray Angle : 15° & 30°

Spray Angle : 45°, 60°, 90° & 120°

DP series Full Cone Spray Nozzle form complete spray coverage in a round area. It provides an uniform spray distribution of medium to large size drops resulting from their vane design which features large flow passage and control characteristics.

Characteristic : Internal vane design features large flow passage and fine control.

Design : Removable vane, Axial flow.

Type : Round pattern, Threaded connection.

- Characteristic** : The absence of any internal parts make these nozzles non-clogging.
- Design** : One piece construction, non clogging type.
- Application** : PT Line, Washing Fighting Systems.
- Flow Rate** : 5 LPM TO 25 LPM
- Pressure** : 2.0 Kg/cm² or Specified
- Spray Angle** : 60° To 180°
- End Connection** : 1/4" TO 3/8"
- M.O.C.** : SS 316, 304, BRASS, PVDF, PVC, PP, PTFE

The helix spiral full cone nozzles combine small nozzle sizes with wide flow openings.

CA series Flat Spray Nozzles are designed for high pressure / high impact washing application. These nozzles are specially designed and machined with precision which allows even spray coverage and distribution. This results in effective and uniform cleaning action over the surface being processed. Flat spray nozzles are available in all steel grades, Plastics & other alloys. Spray angle range available from 45° to 120°

CP series Flat Spray Nozzles are designed for high pressure / high impact washing application. These nozzles are specially designed and machined with precision which allows even spray coverage and distribution. This results in effective and uniform cleaning action over the surface being processed. Flat spray nozzles are available in all steel grades, Plastics & other alloys. Spray angle range available from 15° to 120°. Standard design with self sealing thread connection. Stable spray angle, Uniform distribution of liquid, parabolical distribution of liquid.

Design : One piece construction, Non clogging type.

Application : Rinsing, Lubricating, Industrial washing machines, Cake washing in Centrifuge, CIP, Tray washing.

Tangential Entry Hollow Cone Standard Angle Spray Nozzles (Non-Clogging) :

BA series Hollow cone spray nozzles work on the tangential flow principle and are manufactured by machine tool operation from metal bar stock. This offers versatile construction of small sized nozzles. In addition nozzles can be made on request from any special material and alloys that are available as a bar stock. This flow pattern is essentially a circular ring of liquid. Hollow cone nozzles are best for application requiring good atomization of liquids at lower pressures or where quick heat transfer is needed. These nozzles also feature large and unobstructed flow passage which provide a relatively high resistance to clogging.

There are Following types of hollow cone nozzles.

- 1) Tangential Entry
- 2) Inline (Axial) Entry
- 3) Spiral Hollow cone.

Characteristic : High resistance to clogging

Design : Vaneless (Two Piece Construction) Non clogging

Application : Cooling & Washing of gas

CL series Compact stream jet with a defined jet length owing to optimum flow geometry. Flow conditions are not affected by turbulence. A concentrated jet with high impact force is achieved. This is used for powerful punctiform impact, wherever concentrated jet power is vital.

- Characteristic** : A high efficiency and economical performance is obtained.
- Design** : One Piece Construction.
- Application** : For High pressure cleaning systems, Jet Cutting and separating.
- Features** : Optimized flow maximum jet power concentrated energy.

DESIGN FEATURES

- Effective, economical way to Circulate liquids in closed or open tanks
- No Moving parts
- Inherently clog resistant
- Requires minimal maintenance
- Nozzles operation creates multiplying effect on fluid flow

Plastic Versions

Metal Versions

SPRAY CHARACTERISTICS

- Cone -shaped plume Flow rates: 26.7 to 12000 L/min (motive)
- The volume of discharge liquid will be 3-5 times greater than the motive liquid pumped.
- It's unique venturi design ensures proper mixing of tank Solution.

Eductors have a unique venturi design which enables smaller pumps to circulate large volumes of tank solution. The eductor will circulate four to five gallons of solution for each gallon pumped. Eductors are used for mixing chemicals, suspending solids, adjusting pH, "sweeping" debris or sludge toward a filter intake and many other useful applications.

A = Inlet Flow Rate
B = Entrained Flow Rate
C = (A+B) Out Flow

Application

- | | | |
|---------------------|----------------|------------------------|
| • Plating Tanks | • Pulp Tanks | • Anodizing Tanks |
| • Phosphating Tanks | • Sludge Tanks | • Cooling Towers |
| • Fertilizer tanks | • Paint Booths | • Decorative Fountains |

Eductor in a round tank

Figure 2
Eductors in a tank providing mixing.

Figure 3
Multiple eductor assembly

Figure 4
Eductors in a tank maintaining suspension and mixing of solids.

MOUNTING

An eductor can be mounted in any position. The supply line and manifold piping to multiple eductors must be sized to supply uniform pressure to each eductor. It is important that the eductor be positioned within the tank to insure the free flow of liquid to be mixed into and out of the units. The greatest agitation occurs within the discharge plume; therefore, the discharge end should be aimed towards the most remote part of the tank. On the other hand, the intake end of the unit must be just far enough from the tank corner or wall to allow the free flow of liquid into the suction openings.

Tank shape and size influence the placement and number of eductors required to maintain even agitation. With a spherical tank, a single eductor mounted as shown in the Figure 1 illustration makes the best use of the mixing characteristics of the eductor. With no corners to impede liquid flow, the liquid circulates evenly.

In simple mixing application in a cylindrical, square or rectangular tank, not a plating tank, the angular intersection of stagnation in these areas. A single eductor mounted as shown in Figure 2 will minimize this. For high agitation, use of multiple eductors are recommended as shown in Figure 3.

A slight downward angle of the eductors can be helpful in maintaining the velocity at the tank bottom which is necessary to keep solids in suspension for easier removal by a filter system. (See Figure 4)

SH SERIES PIPE HOLDERS

SH series pipe holders are user-friendly and convenient solution for fixing spray manifolds onto tunnels walls in surface treatment plants. They are easy to assemble, excellent fastening and low cost. The single clip type is suitable for plastic pipes and double clip is suitable for metallic pipes.

Typical application : Holding pipe, Piping assembly

Pipe size : 3/4", 1", 1 1/4", 1 1/2", 2"

Materials

Body : Polypropylene (20%-25% glass filled)

Clamp : SS 304 / SS 316

Colour : L. Blue

SH series holder body is designed to be fastened to the tunnel wall by means of one M10 bolt with 17 mm hexagonal head.

The drawing shows the distances of the pipe central axis from the wall for different pipe sizes assembled onto the pipe holder.

CODE		PIPE SIZE (inch)
Single Clamp	Double Clamp	
SH1E	SH2E	3/4"
SH1F	SH2F	1"
SH1G	SH2G	1 1/4"
SH1H	SH2H	1 1/2"
SH1K	SH2K	2"

Single Clamp

Double Clamp

ACC501, ACC502 & ACC503 Camlock couplings are a very popular solution for quick assembly/disassembly also provides ease of operation.

- Thread size 3/4", 1", 1 1/4", 1 1/2"
- Thread specification BSP, NPT
- Typical applications Quick installation in piping, sanitary installation applications.

Materials

Body : Polypropylene (20% - 25% glass filled)

Lever : SS 316

O-ring : NBR (standard)
 Viton (optional)
 EPDM (optional)

CAMLOCK COUPLING - INSTALLATION

1. Install the threaded portion at each end

2. Pull levers down and fasten

3. Fix the clip
